Dear Ms. Lane,

I am a concerned Mobilian wanting any pertinent information regarding petroleum spills/blowouts in recent times and past few years involving waterbodies and drinking water supplies caused by pipelines or drilling operations both on-land and in Gulf of Mexico.

I was past president of the Mobile Bay Audubon Society for thirty years and we started battling Mobil Oil and managed to stop the company from drilling in Mobile Bay because of information gathered from this office. One being Mobil had three blowouts in one month . WOW

They received their permit but with conditions suggested by members of the Society such as the requirement of a \$45 million dollar bond and The No Dump Policy requiring them to not dump drill muds or cuttings in our Bay preventing us from being identified as a Superfund site such as the thousands of drilling rigs found in the Gulf to be.

The reason for the request is to stop Plains All American and South Cap from being allowed to place a questionable pipeline alongside our only/major drinking water supply—Big Creek Lake which they intend to do and the CorpsNWP 600 page document does not address in any way.

We of course realize this is the foot in the door as there will be additional requests, we just want them to move to Pascagoula where the toxic tar sands is to be refined taking their 30 storage tanks now placed in our floodplain of the Mobile River and Mobile Bay and moving out of our area. We don't want us to be victims for them to make billions at the expense and threat to our lives, our wetlands and streams and our drinking water supplies.

We are aware of the legal action taken against Plains All American and their dismal pipeline spills threatening waterbodies in five states, we just want any additional info on either these companies and others. I feel sure TRANSCO would be listed as well.

Thank you

Respectfully,

Myrt Jones
